Energy Conscious Products & Solutions for Supermarkets

SPORLAN

ENGINEERING YOUR SUCCESS.

⚠ WARNING – USER RESPONSIBILITY

Failure or improper selection or improper use of the products described herein or related items can cause death, personal injury and property damage.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

For safety information see the Safety Guide at www.parker.com/safety or call 1-800-CParker.

OFFER OF SALE

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by the provisions stated in the detailed "Offer of Sale" elsewhere in this document or available at www.parker.com.

FOR USE ON AIR CONDITIONING AND REFRIGERATION SYSTEMS ONLY

Catalog 744, March 2015 supersedes Catalog 744, January 2010 and all prior publications.

CO₂ Innovations

ENERGY CONSCIOUS PRODUCTS and SOLUTIONS FOR SUPERMARKETS

As a world leader in refrigerant flow controls, Sporlan Division of Parker Hannifin continues to meet the challenges of the future. **Our growing line of products for CO₂ set new standards for robust design and advanced technology.**

This condensed catalog contains product information specifically for CO₂ applications. By including a minimum of engineering information we are able to provide a concise reference to pertinent data and specifications on Sporlan CO₂ products.

For additional engineering information, a complete Sporlan Catalog or CD, please contact your nearest Sporlan Sales Office, Authorized Sporlan Wholesaler or log on to www.sporlanonline.com.

R-744 CASCADE SYSTEM SCHEMATIC

R-744 SECONDARY SYSTEM SCHEMATIC*

* For Solenoid Valves for Secondary Coolant CO₂ Systems, please refer to Bulletin 30-10-10, or contact Sporlan Division of Parker.
 Note: No pressure relief or ball valves are shown. Relief valves must be present where liquid CO₂ can be trapped.
 All components must be properly pressure rated and protected for safe installation.

DISTRIBUTORS

CO₂

All Sporlan distributors are ready for service with CO₂. The following tables are provided for making selections based on procedure explained in Bulletin 20-10.

Ratings based on -5°C liquid, -30°C evaporator temperature.

* Do not use below 1 psi (0.07 bar) pressure drop.

For other liquid line temperatures use liquid correction factors below. Maximum Operating Pressure Differential (MOPD) for the AC coil is 450 psi (31.0 bar). Maximum Rated Pressure (MRP) = 700 psig (48.3 barg).

| LIQUID TEMPERATURE °F | | | | | LIQUID TEMPERATURE °C | | | | | |
|---|------|------|------|------|---|------|------|------|------|------|
| 0° | 10° | 20° | 30° | 40° | -20° | -15° | -10° | -5° | 0° | 5° |
| CORRECTION FACTOR, LIQUID CAPACITY RATING | | | | | CORRECTION FACTOR, LIQUID CAPACITY RATING | | | | | |
| 1.13 | 1.07 | 1.00 | 0.93 | 0.86 | 1.18 | 1.12 | 1.06 | 1.00 | 0.94 | 0.87 |

These factors include corrections for liquid refrigerant density and net refrigerating effect and are based on an average evaporator temperature of 40°F (5°C). For each 10°F (10°C) reduction in evaporating temperature, capacities are reduced by approximately 1-1/2%.

The capacity tables above are based on Subcritical CO₂ DX systems.

For Secondary Coolant CO₂ applications and capacities, please refer to Bulletin 30-10-10, or contact Sporlan Division of Parker.

Disclaimer: Some CO₂ systems do not use oil or lubrication in their systems. If so, the lack of lubrication in the system may cause the internal components of the valve to wear prematurely resulting in eventual failure of the valve. This disclaimer is for solenoid valves only.

SOLENOID VALVES

CO₂

TYPE E2 and E5 SERIES

The **E2 and E5 Series** are hermetic solenoid valves with pilot operated disc construction. These valves **may be mounted horizontally, on their side or in a vertical line.**

The **E2 and E5 series** solenoid valves feature extended solder type connections as standard. One important benefit to the user is that all valves in the “**E2 and E5**” series can be installed using either low or no silver content brazing alloy.

The MKC-1 coil is Class “F” temperature rated and is provided as standard, therefore a high temperature coil is not required for discharge service.

Ordering Instructions

When ordering complete valves, specify Valve Type, Connections, Voltage and Cycles. When ordering Body Assembly, specify Valve Type and Connections. When ordering Coil Assembly **ONLY**, specify Coil Type, Voltage and Cycles. **Example: MKC-1 120/50-60.**

Type E5S130-HP

For Secondary Coolant CO₂ applications, please refer to Bulletin 30-10-10, or contact Sporlan Division of Parker.

■ Capacities based on 20°F (-6.7°C) liquid temperature, -20°F (-29°C) evaporator temperature. For other liquid line temperatures use liquid correction factors below. Maximum Operating Pressure Differential (MOPD) for the AC coil is 450 psi (31 bar). Maximum Rated Pressure (MRP) = 700 psig (48.3 barg).

■ Dual voltage 4-wire coils, 120-208-240/50-60 are available at slight additional cost. For other voltages and cycles, consult Sporlan Division of Parker, Washington, MO.
 ■ Available with conduit boss, junction box, or DIN at no extra charge.
 ■ For capacity at other pressure drops, see page 6 and 7.
 ■ See disclaimer on page 6.

SOLENOID VALVES

CO₂

TYPE E6, E8 and E10 SERIES

The **E6, E8 and E10 Series** are compact solenoid valves with pilot operated disc construction for refrigeration and air conditioning. These valves **may be mounted horizontally, on their side or in a vertical line**. They are suitable for suction line service because very low pressure differential, 1 psi, is required for full operation.

The **Type E6, E8 and E10 series** solenoid valves feature extended solder type connections as standard. One important benefit to the user is that all valves in the “**E6, E8 and E10**” series can be installed without disassembly using either low or no silver content brazing alloy.

The MKC-1 coil is Class “F” temperature rated and is provided as standard, therefore a high temperature coil is not required for discharge service.

Type E6S130-HP

Ordering Instructions

When ordering complete valves, specify Valve Type, Connections, Voltage and Cycles. When ordering Body Assembly, specify Valve Type and Connections. When ordering Coil Assembly ONLY, specify Coil Type, Voltage and Cycles. **Example: MKC-1 120/50-60.**

■ Capacities based on 20°F (-6.7°C) liquid temperature, -20°F (-29°C) evaporator temperature. For other liquid line temperatures use liquid correction factors below. Maximum Operating Pressure Differential (MOPD) for the AC coil is 450 psi (31 bar). Maximum Rated Pressure (MRP) = 700 psig (48.3 barg).

■ Dual voltage 4-wire coils, 120-208-240/50-60 are available at slight additional cost. For other voltages and cycles, consult Sporlan Division of Parker, Washington, MO.
 ■ Available with conduit boss, junction box, or DIN at no extra charge.
 ■ For capacity at other pressure drops, see page 6 and 7.
 ■ See disclaimer on page 6.

SOLENOID VALVES

CO₂

TYPES E35 SERIES

Types **E35 Series** solenoid valves are pilot operated for refrigeration and air conditioning applications. They are suitable for suction service because very low pressure differential, 1 psi, is required for full operation. The **E35 Series may be mounted horizontally, on their side or in a vertical line.**

The **Type E35** series solenoid valves feature extended solder type connections as standard. One important benefit to the user is that all valves in the “**E35**” series can be installed without disassembly using either low or no silver content brazing alloy.

The MKC-1 and OMKC-1 coils are Class “F” temperature rated and are provided as standard, therefore a high temperature coil is not required for discharge service.

Ordering Instructions

When ordering complete valves, specify Valve Type, Connections, Voltage and Cycles. When ordering Body Assembly, specify Valve Type and Connections.

Type **ME35S1110-HP**

- ① 1-5/8” ODM Type L tubing may be slipped over 1-3/8” fitting, without the use of a coupling.

When ordering Coil Assembly ONLY, specify Coil Type, Voltage and Cycles. **Example: MKC-1 120/50-60; OMKC-1 120/50-60.**

IDENTIFICATION

NOMENCLATURE - E SERIES

| M | E | 10 | S | 2 | 5 | 0 | S |
|------------------|---------------|--------------------|--------------------|----------------|-------------------------|---|--|
| Manual Lift Stem | Design Series | Port Size in 1/32" | Connections Solder | Coil Size ①, ② | Connection Size in 1/8" | *Connections 0 - ODF X ODF 1 - ODF X ODM 2 - ODM X ODF 3 - ODM X ODM | Coil Connection S - Spade E - DIN 43650A |

Type "E" series is identified by an expanded nomenclature. The system of valve identity based on port size. In addition, the "E" series identifies the connection size and type. The advantage of the "E" series nomenclature system is that it allows ease in valve identification of the standard line and can provide considerable information about special valves supplied to manufacturers.

For connections and other special features consult Sporlan Division of Parker, Washington, MO.

① The MKC-1, OMKC-1, MKC-2 and OMKC-2 are fungus proof and meet MIL-I-631C.

② The standard MKC-1 and MKC-2 are class "F" rated.

* Standard connections are ODF inlet x ODF outlet on "E" Series valves. Minimum quantities may be required for other connections.

APPLICATION

COMPRESSOR CAPACITY REDUCTION SERVICE

Sporlan Solenoid Valves may be used in conjunction with Sporlan Discharge Bypass Valves for capacity reduction service. For capacity information and further details on the Discharge Bypass Valves, consult Sporlan Division of Parker, Washington, MO.

FILTER-DRIERS ARE ESSENTIAL

Dirt and other system contaminants present a problem for refrigeration and air conditioning controls. Since pilot operated solenoid valves operate with rather close tolerances, system cleanliness is imperative. The Sporlan **Catch-All® Filter-Drier** filters out minute particles of dirt and other foreign matter, thus protecting the valve.

Sporlan recommends using a **Catch-All® Filter-Drier** ahead of every solenoid valve on all refrigeration and air conditioning applications. Contact Sporlan before adding a **Catch-All® Filter-Drier** in the discharge line.

TRANSFORMER SELECTION FOR LOW-VOLTAGE CONTROL SYSTEMS

Many systems utilize low voltage controls, requiring the use of a transformer for voltage reduction, normally to 24 volts. The selection of a transformer is not accomplished by merely selecting one that has the proper voltage requirements. The volt-ampere (VA) rating is equally important. To determine the VA requirement for a specific solenoid valve, refer to the chart below. It should be noted, that insufficient transformer capacity will result in reduced operating power or lowering of the MOPD value.

If more than one solenoid valve and/or other accessories are operated from the same transformer, then the transformer VA rating must be determined by adding the individual accessories' VA requirements.

FUSING

Sporlan Solenoid Valves are not supplied with fuses. Fusing should be according to local codes. We recommend fusing the hot leg of the valve wiring with fast acting fuses and the valve should be grounded either through the fluid piping or the electrical conduit.

| COIL KIT | 24 VOLTS/ 50-60 CYCLES | | 120 VOLTS/ 50-60 CYCLES | | 240 VOLTS/ 50-60 CYCLES | | TRANSFORMER RATING VOLTS-AMPERES FOR 100% OF RATED MOPD OF VALVE |
|-----------------|---------------------------|---------|----------------------------|---------|----------------------------|---------|---|
| | CURRENT-AMPERES | | CURRENT-AMPERES | | CURRENT-AMPERES | | |
| | INRUSH | HOLDING | INRUSH | HOLDING | INRUSH | HOLDING | |
| MKC-1 OMKC-1 | 1.9 | 0.63 | 0.39 | 0.14 | 0.19 | 0.09 | 60 |
| MKC-2 OMKC-2 | 3.1 | 1.4 | 0.60 | 0.26 | 0.31 | 0.13 | 100 |

■ All current values are based on 60 cycles.

■ Volt-ampere ratings are based on inrush currents.

■ Above values are based on the most severe conditions. — Consult Sporlan Division of Parker, Washington, MO for coil characteristics on specific valve types.

Catch-All FILTER-DRIERS

CO₂

The universal acceptance of the **Catch-All® Filter-Drier** is due to its unique molded porous core, consisting of a blend of highly effective desiccants. The quality features built into it assure years of service on any refrigeration system.

Foreign Matter – The **Catch-All Filter-Drier** will filter out scale, solder particles, carbon, sludge, dirt or any other foreign matter with negligible pressure drop. Fine particles that would go through an ordinary strainer are removed down to a minimum size in one pass filtration. The large filtering area of the **Catch-All Filter-Drier** core permits it to collect a large amount of dirt without plug up.

Moisture – The **Catch-All Filter-Drier** removes moisture from the refrigerant by adsorbing and retaining it deep within the desiccant granules. The blend of desiccants used in the **Catch-All Filter-Drier** are specially formulated for exceptional water removal.

Acid – The **Catch-All Filter-Drier** is unexcelled in acid removal ability. The various organic acids are adsorbed and held by the desiccant in a manner similar to the adsorption of moisture. Tests have demonstrated that the **Catch-All Filter-Drier** has superior acid

No CE marking according to art. 3.3 PED 97/23/EC.

Catch-All FILTER-DRIERS

CO₂

removal ability. This ability, along with its excellent ability to clean up the oil, is responsible for the excellent field performance in cleaning up severely contaminated systems.

Oil, Sludge and Varnish – Even the best refrigeration oils break down to produce varnish, sludge and organic acids. Only the **Catch-All Filter-Drier** is capable of efficiently removing these products of oil decomposition.

Special Applications – A special “HH” core **Catch-All Filter-Drier** is available to remove wax which frequently causes difficulty on low temperature refrigeration systems. For cap tube systems, use the C-032-CAP or C-032-CAP-T Catch-All which has fittings suitable for attaching to any size capillary tube.

Remember...It's the CORE that counts!

① Ratings based on 20°F (-5°C) liquid, -20°F (-30°C) evaporator temperature.

② The filtration area is equal to the core surface area plus the large internal surface available for depth filtration.

The variation in flow ratings of filter-driers having the same size core and shell is caused by the difference in connection sizes used.

Catch-All FILTER-DRIERS

CO₂

REPLACEABLE CORE TYPE ODF SOLDER CONNECTIONS

The rugged construction of the Replaceable Core Catch-All has proven itself in the field for many years. The design features include:

1. The famous **molded porous core** for maximum contaminant removal. The core cannot swell, powder or pack – assuring ease of installation and removal.
2. The **bolt and nut attachment** of the end plate provides simple trouble-free installation.
3. The **internal** construction gives a one piece assembly and assures proper core alignment.

4. A **complete line** of fitting sizes – all with copper fittings.
5. **No plastic parts** are used – all internal parts are plated steel.
6. A **corrosion resistant powder paint** protects the exterior of the shell.

cUL_{US} Listed — Guide-SMGT-File No. SA-1756.

* "P" Dimension is the pull space required to change core.

** Optional Secondary Filter must be purchased separately. O-rings (p/n 621-025) are supplied with each secondary filter, but can be purchased separately. The secondary filter cannot be used if the shell is installed in the suction line.

Type numbers with G suffix indicate that unit is supplied with 1/4" female pipe connection in the end plate and pipe plug. For liquid line service and angle charging valve for system charging purposes can be installed in place of the pipe plug. Angle charging and Schrader type access valves are available from your Sporlan Wholesaler.

① Ratings based on 20°F (-5°C) liquid, -20°F (-30°C) evaporator temperature.

② The filtration area is equal to the core surface area plus the large internal surface available for depth filtration.

The variation in flow ratings of filter-driers having the same size core and shell is caused by the difference in connection sizes used.

SUCTION LINE FILTER-DRIER RATINGS FOR NEW SYSTEMS AND CLEAN-UP AFTER BURNOUT

SELECTION INSTRUCTIONS

The flow capacities are rated at the maximum recommended pressure drop for **permanent** installation.

To ensure the suction line filter-drier has ample contaminant removal ability, selection must be based on flow capacity and the amount of desiccant required for system clean-up. The suction line filter-drier must be large enough to adequately remove acid, moisture and solid contaminants without causing nuisance plug-ups. Sizing is especially important for sealed type suction line filter-driers since they should be sized to clean a small system with one service call.

To reduce the pressure drop through replaceable core shells, substitute cores with filter elements (see page 20) after the system has been cleaned up. The 6171-5 screen should be discarded when cores are replaced with RPE-48-BD elements in RSF shells.

For complete description of the suggested system clean-up procedure, request Bulletin 40-10.

*Denotes TEMPORARY INSTALLATION. Cores for system clean-up; RPE-48-BD Filter Elements should be installed after clean-up. Ratings based on 20°F (-5°C) liquid, 25°F (14°C) superheat. Rated in accordance with ARI Standard 730.

SIGNIFICANCE OF THE TYPE NUMBER

The letters and numerals in the Catch-All® type number each have a significance. The “C” indicates Catch-All. The **first two or three digits** indicate cubic inches of desiccant. The **last one or two digits** indicate fitting size in eighths of an inch. For sealed models, a “-S” following the last digit indicates solder fittings, and **no letter** indicates a flare fitting. Replaceable core models (C-420 and larger) only have solder connections and the “-S” is omitted. Examples are: C-083 is 8 cu. in. and 3/8” flare, C-309-S is 30 cu. in. and 1-1/8” solder, C-19213-G is 192 cu. in. and 1-5/8” solder.

Other suffix letters indicate special qualities. For example:

- “-T” indicates a pressure tap consisting of a Schrader type access valve on the inlet end of the Catch-All.
- “-HH” indicates a charcoal style core for wax removal and clean-up after a hermetic motor burnout.
- “-F” indicates a female flare outlet fitting with a male flare inlet fitting.
- “-FM” indicates a female flare inlet fitting with a male flare outlet fitting.
- “-CAP” indicates a Catch-All particularly designed for installation on capillary tube systems.

REPLACEABLE CORES AND PLEATED FILTER ELEMENTS – ORDER SEPARATELY

Cores for replaceable core type filter-driers are molded of exactly the same desiccants that are used in the popular sealed filter-driers.

Cores are individually packed in **metal cans**, fully activated and hermetically sealed against moisture and dirt.

Filter Elements are dried and packed in individual sealed metal cans. This method of packaging prevents the element from picking up moisture from the atmosphere.

Detailed **instructions** are printed on each can. Each can contains a “**triple gasket**” consisting of a new end plate gasket, an end plate gasket for certain competitive filter-driers and a core gasket where desired. See the specifications on pages 16 and 17 for the number of cores required for each type drier.

RCW-42 – High Water Capacity Core – Order as separate item – Fits ONLY shell type C-R424, C-R425 and C-R427. **Designed specially for use with POE oils.** This core should be used on systems that have a ruptured water cooled condenser, or that have been exposed to the atmosphere, or for some reason have a high amount of moisture in the system.

RC-4864 – Activated Core – Order as separate item – Fits types C-480 thru C-19200 Series shells and Replaceable Suction Filter (RSF) shells. This is the traditional core suitable for most installations in the liquid or suction line applications in mineral oil systems.

RCW-48 – High Water Capacity Core – Order as separate item – Fits types C-480 thru C-19200 Series shells and Replaceable Suction Filter (RSF) shells. **Designed specially for use with POE oils.** This core should be used on systems that have a ruptured water cooled condenser, or that have been exposed to the atmosphere, or for some reason have a high amount of moisture in the system.

RC-4864-HH – Activated Charcoal Core – Order as separate item – Fits types C-480 thru C-19200 Series shells and Replaceable Suction

Filter (RSF) shells. This core should be used for wax removal on low temperature systems, and for clean-up of systems that have had a hermetic motor burnout.

RPE-48-BD – Filter Element – Order as separate item – Fits types C-480 thru C-19200 Series shells and **Replaceable Suction Filter (RSF) shells.** This element should be used in RSF shells installed in the **suction line** to obtain the lowest possible pressure drop. In cleaning up a system after a hermetic motor burnout, cores should be used first. Then after the system is thoroughly clean, this filter element can be installed in the RSF shell.

RC-10098 – Activated Core — Order as separate item—Fits types C-30000 and C-40000 Series shells. This is the traditional core suitable for liquid and suction line applications in mineral oil systems.

RCW-100 – High Water Capacity Core — Order as separate item—Fits types C-30000 and C-40000 Series shells. Designed specially for use with POE lubricants. This core should be used on systems that have a ruptured water cooled condenser, or that have been exposed to the atmosphere, or for some reason have a high amount of moisture in the system.

RC-10098-HH – Activated Charcoal Core — Order as separate item—Fits types C-30000 and C-40000 Series shells. This core should be used for wax removal on low temperature systems, and for clean-up of systems that have had a hermetic motor burnout.

RPE-100 – Filter Element — Order as a separate item—Fits types C-30000 and C-40000 Series shells. This filter element should be used in the suction line to obtain the lowest possible pressure drop after cores were used for system clean-up.

HH STYLE CATCH-ALL FOR WAX REMOVAL

Small amounts of wax are often a problem on **low temperature systems.** Even well engineered systems frequently contain minute quantities of wax which are sufficient to clog expansion valve screens or cause sticking of the valve. Sporlan has developed a special blend of desiccants including activated charcoal which removes small amounts of wax in the liquid line before this wax can cause trouble at the expansion valve. These Catch-All Filter-Driers have been very successful in correcting trouble jobs in the field.

Select an HH Style Catch-All Filter-Drier if wax problems occur on low temperature systems. In addition to their wax removal ability, these filter-driers will remove all of the other harmful contaminants that the standard filter-driers remove. Listed in the table are various Catch-All models that incorporate the HH style core.

FILTER-DRIERS

CO₂

TYPE CO SERIES FOR TRANSCRITICAL CO₂

The CO Series product offering has been designed to withstand the extreme pressure of transcritical carbon dioxide (R-744) systems while providing complete system protection in a compact design. A unique combination of moisture, acid, and solid debris removal extends the life, reliability, and capacity of these systems that operate under extreme conditions.

Type CO-022-S

The smaller models are ideal for application in vending machine and beverage dispensing equipment. The larger models are ideal for applications up to 10 tons. Combining ideal capability in a compact

size, the CO Series enables system optimization while maximizing protection and cost effectiveness. Other fitting sizes are available upon request. Please contact your Sales Engineer for assistance.

DESIGN FEATURES

- 2,250 psi Maximum Rated Pressure (MRP) (155 bar)
- 6,750 psi Burst Pressure Rating (465 bar)
- cURus Recognized Component in UL File SA1756
- Solid copper connections for fast, easy system connection
- Desiccants optimized for use with R-744

BALL VALVES

CO₂

EBV and EBVT SERIES (WITH ACCESS FITTING)

- **Welded body joint.** Factory tested to ensure positive, leak-free performance. Forged brass body construction with extended copper fittings and optional access fittings.
- **Full size ports for unrestricted flow** on most sizes 1/4" (6 mm) through 2-1/8" (54 mm).
- **Dual Teflon seals surround the polished, brass ball to prevent leakage.** Stem seal and stem washer provide the primary stem seal. Bottom load stem for safety.
- **Stainless steel stop plate** ensures fully open to fully closed with a 1/4 turn.
- **Ball internal relief port design** ensures positive shut-off in either flow direction, even during system evacuation.
- **All EBV(T) ball valves are bi-directional** and may be installed in any position.
- **Full refrigeration service temperature range: -40°F to +325°F (-40°C to +149°C).**
- **Design working pressure: 700 psig (49 bar).**
- **U.L. Listed File No. SA13413 (SFJQ)**
- **Suitable for subcritical CO₂ up to 700 psig (49 bar).**
- **Date code stamped** into valve body Yr/Mo/Day

See•All MOISTURE AND LIQUID INDICATOR

CO₂

8 OUTSTANDING BENEFITS

- The See•All Moisture and Liquid Indicator provides a true moisture indication for refrigerants.** The dark green indicates dry and a bright yellow indicates wet. The one indicator avoids the confusion found in models with two elements. You **cannot** pick the wrong element when checking the moisture content of the system.
- Reliable and accurately calibrated color change points.** The See•All Moisture and Liquid Indicator is accurately calibrated in parts per million of moisture for each refrigerant. All moisture indicators change color on the basis of relative saturation of the refrigerant. Therefore, liquid line temperature must be considered if an accurate calibration is to be obtained. For easy comparison, a color chart is part of the label.
- Color changes are easily distinguished and reversible.** The indicator's color differs so widely between WET and DRY conditions that there is no possibility of confusion between the two. Colors will reverse as often as moisture concentration in the system changes.
- Large full view sight glass.** The See•All Moisture and Liquid Indicator has an extra large crystal clear sight glass for viewing the refrigerant. Bubbles indicate a shortage of refrigerants or a restriction in the liquid line.
- Indicator protected from discoloration and dirt.** The indicator is protected by a filter pad and screen. This prevents washing of the indicator by the refrigerant and protects it from system contamination and turbulence.
- Replaceable indicator element.** The color indicator paper can be changed on the new fused glass models without removing the See•All from the line. Replacement is through the bottom (see SA-14SU below). Request the K-SA-4 kit.
- Disassembly of the smaller sizes not required.** The extended fittings on solder models in the smaller sizes make it unnecessary to disassemble for installation.
- A double duty plastic cap** is supplied to keep the glass free from dust, dirt and grease. It also permits the service engineer to use his own discretion concerning instructions to his customers on observing the See•All Moisture and Liquid Indicator.

Maximum Rated Pressure for all models is 650 psig (44.8 barg). Overall width is: 1.31" (33.3 mm) for 1/4" and 3/8" sizes, 1.58" (40.1 mm) for 1/2" and 5/8 sizes, and 1.38" (35.1 mm) for 7/8" and 1-1/8" sizes. Most solder connections can be used as male fittings as well as female fittings. The 1/4" ODF is 3/8" ODM, the 3/8" ODF is 1/2" ODM, the 1/2" ODF is 5/8" ODM, and the 5/8" ODF is 3/4" ODM. Models with female flare and/or swivel nut connections are supplied with a copper gasket in the fitting.

① These models have copper connections and feature a removable element cartridge – for replacement cartridge specify AC-20.

REPLACEABLE *Suction Filters*

CO₂

The Replaceable Suction Filter shell, used with RPE-48-BD pleated filter element, is designed to be installed in the suction line of new systems to remove circulating contaminants.

RSF-4817-T

HOW IT'S USED

Sporlan Replaceable Suction Filters are installed in the suction line of refrigeration or air conditioning systems to remove contaminants that may be in the system at startup.

The Replaceable Suction Filter has large fittings permitting the use of a small shell on a system with large line sizes, resulting in considerable economy. The angle construction is suitable of flow in either direction, which results in easy installation even on compact racks.

The Replaceable Suction Filters should be used with cores for cleaning up a system after a hermetic motor burnout. Select the RC-4864, RC-4864-HH or RCW-48 replaceable cores. After cleanup, install RPE-48-BD elements in the shells.

DESIGN BENEFITS

- High flow capacity
- Corrosion resistant coating on shell
- Can be used with desiccant cores for clean-up after burnout
- Various fitting sizes up to 1-5/8" line size
- Access valve supplied for pressure drop measurement or charging

FLOW CAPACITY SELECTION

This table below gives information for choosing the proper model for a given system. The filter elements are supplied in hermetically sealed metal cans. **For flow capacity WITH CORES, see page 19.**

Ratings based on 20°F (-5°C) liquid, 25°F (14°C) superheat.

Listed by Underwriters' Laboratories, Inc. Guide SMGT File No. SA-1756. RSF shells have a 500 psig (34.5 barg) M.R.P. rating.

Note: Ratings are in accordance with ARI Standards 730. Flow capacity (tons/kW) with cores is approximately 40% of the above values.

ELECTRIC VALVES

CO₂

ELECTRIC EXPANSION VALVES

TYPE SER

The Sporlan SER family of Electric Expansion Valves are electronically operated bipolar stepper motor valves. When paired with an appropriate controller and sensors, the valves provide precise liquid flow control in subcritical CO₂ applications. With high resolution linear actuators and uniquely characterized pin and port combinations, the valves can control down to 10% of rated (full stroke) capacity. The entire valve family now features removable M12 cables, that can be installed in any of four orientations, and are available in four lengths between 10' (3 m) and 40' (12 m).

Small SER valves (up to SER-C) are rated 1,015 psig (70 bar). SER-D and larger valves are approved for a rated pressure of 700 psig (48 bar).

For more information on Sporlan SER valves, please reference Bulletin 100-20.

ELECTRIC VALVES

CO₂

ELECTRIC PRESSURE REGULATING VALVES

TYPE CDS

The Sporlan CDS family of Electric Pressure Regulating Valves are electronically operated bipolar stepper motor valves. When paired with an appropriate controller and sensor, the valves provide precise temperature or pressure control in liquid or suction subcritical CO₂ applications.

With high resolution linear actuators and balanced pistons, the CDS family can provide accuracy and repeatability across the entire operating range, down to 10% of full stroke capacity. Rated 48 bar (700 psig), the small CDS valves (CDS-2, -4 and -7) now feature removable M12 cables that can be installed in any of four orientations. Rated 680 psig (47 bar), the large CDS valves (-9 and -17) feature hermetic cables that are available in four lengths, from 10' (3 m) to 40' (12 m).

With 17 years of field proven reliability, Sporlan CDS valves can be counted on to meet your performance expectations. For more information, please reference Bulletin 100-40.

ELECTRIC VALVES

CO₂

ELECTRIC PRESSURE REGULATING VALVES

TYPE GC AND FGB FOR TRANSCRITICAL CO₂

The Sporlan GC and FGB valve families are stepper motor driven pressure regulating valves designed specifically for transcritical CO₂ (R-744) refrigeration systems. The GC family is designed for application as a Gas Cooler valve, but can also be applied as a Flash Gas Bypass valve.

The FGB family is designed to extend the capacity range of the GC valves when applied as Flash Gas Bypass valves. Both families are rated for 2030 psi (140 bar) maximum working pressure. Offered with a PSD4 Interface Board and PSS4B Backup Power Module, the GC/FGB valves are easy to implement.

FEATURES

- High resolution actuators with 2500 steps
- Uniquely characterized pin and port combinations for excellent low flow control
- Cartridge valve designs with interchangeable bodies
- Tight seating capability
- Replaceable / serviceable screens

For more information on Sporlan Transcritical CO₂ valves, including sizing information for Flash Gas Bypass applications, please refer to Bulletin 100-80.

ELECTRONIC CONTROLLERS

CO₂

ELECTRIC VALVE INTERFACE BOARDS TYPE IB

The Sporlan IB series Interface Boards are designed to translate a 0-10V or 4-20mA signal from an externally supplier controller into a proportional valve position. This signal can correlate to pressure, temperature, superheat or any other system variable that is being controlled by an electric valve. This is the most straightforward implementation of Sporlan SER or CDS valves using third party controllers, without the setup and qualification required to ensure

reliable valve response. The 3” (76.2 mm) square board can be mounted using non-metallic standoffs, or with the supplied snap-track.

For more information on Sporlan Interface Boards, please refer to Bulletin 100-50-2.

ELECTRIC VALVE CONTROLS TYPE KELVIN II

Sporlan offers a variety of standalone electric valve controls, each targeted at precise control of a refrigeration or air conditioning system parameter. Utilizing unique control algorithms, the Kelvin II Series of controls features flexibility for a variety of applications, and can be paired with the proper Sporlan subcritical CO₂ Electric Valve to meet the system requirements. The controls also feature RS-485 communications to enable remote monitoring, or to tie into a higher level system controller.

For more information on Sporlan Kelvin II Series of controls, please refer to Bulletin 100-50-5, or the I/O Manuals in the 100-50-5 series.

ELECTRIC VALVE SERVICE TOOL TYPE SMA-12

The Sporlan SMA-12 (Stepper Motor Actuator) is a service tool designed to help diagnose systems with Electric Valves by verifying proper operation of the stepper motor. The unit is powered by two 9V alkaline batteries, and will power any SER or CDS 12VDC bipolar stepper motor valve. The step rate is selectable at 1, 50, 100 or 200 steps per second, and will stroke the valve in both the opening and closing directions. Red LEDs indicate continuity of the motor windings and battery power, and binding posts are provided for quick connection

of valve cables. In the event of a controller failure, the SMA-12 can be used to manually position a valve to maintain performance until service can be completed. The SMA-12 is the basic troubleshooting tool for Electric Valve operated systems.

| ITEM NUMBER | DESCRIPTION | CONNECTOR |
|-------------|------------------|---------------------------------------|
| 953276 | SMA-12 | Binding Post |
| 953277 | SMA-12 w/Pigtail | Delphi Packard Weather Pack, 12034342 |
| 953229 | SMA-12 w/Pigtail | Phoenix Contact 1803442 |

REFRIGERATION CONTROLLERS TYPE PSK

Sporlan PSK electronic controllers manage low and medium temperature self contained refrigeration units by controlling compressors, defrost, lights and fans. There are several models to choose from, ranging from simple logic and wiring (for base compressor and

defrost control) to models with multiple I/O and evaporator fan management (for complex compressor, defrost and fan control).

For more information on Sporlan PSK Refrigeration Controllers, please refer to Form 100-359, or the I/O Manuals in the 100-50-6 series.

OIL LEVEL CONTROL SYSTEM

CO₂

Sporlan's Oil Level Control System Components were developed to offer the refrigeration industry an oil level control system of the highest quality. The heart of the system is the Oil Level Control which when matched with the Oil Reservoir and Oil Differential Check Valve maintains a minimum oil level in the compressor crankcase during all phases of system operation.

OIL RESERVOIRS

Sporlan oil reservoirs are holding vessels for stand-by oil necessary for the operation of a commercial refrigeration or air conditioning system. The oil reservoir is shipped with service valves so the vessel can be isolated from the rest of the system.

FEATURES AND BENEFITS

- High flow capacity
- Corrosion resistant coating on shell
- Sightglass ports with float ball indicators for oil level monitoring
- 3/8" male flare rotalock valves shipped with oil reservoir allow for easy adjustment when piping into system
- 3/8" male flare vent port – for connection to the suction line
- Mounting studs and brackets
- Powder coating passes 500 hour ASTM salt spray
- UL Listed SORT/SORT7 for the USA and Canada with a Maximum Rated Pressure (MRP) of 500 psi (34 bar)

Type POR

| MODEL NO. | TOTAL CAPACITY Gallons | 'A' CAPACITY Gallons | 'B' CAPACITY Gallons | NUMBER of SIGHT-GLASSES | LENGTH Inches | SHELL DIAMETER Inches |
|-----------|------------------------|----------------------|----------------------|-------------------------|---------------|-----------------------|
| POR-2 | 2 | 3/4 | 3/4 | 2 | 18 | 6.0 |
| POR-3 | 3 | 3/4 | 1-1/2 | 3 | 23 | 6.0 |
| POR-4 | 4 | 3/4 | 2-3/4 | 3 | 36 | 6.0 |

'A' capacity is the capacity to the first sightglass.
 'B' capacity is the capacity between the two sightglasses for the POR-2 and the top and bottom sightglasses for the POR-3 and POR-4.

OIL DIFFERENTIAL CHECK VALVE

TYPES OCV-5, -10, -20 and -30

The Sporlan Oil Level Differential Check Valve (OCV) is installed on the 3/8" SAE fitting on top of the OR-1-1/2, and allows pressure to be relieved from the reservoir to the suction as required to maintain a pressure in the reservoir at a preset level above the suction pressure. The pressure differential created by the OCV assures oil flow from the reservoir to the Oil Level Control providing there is adequate oil in the reservoir.

The OCV will only relieve pressure from the reservoir in excess of its fixed set point. Systems with fluctuating suction pressure as a result of compressor unloaders, staging or other suction line controls must be fitted with an OCV with a differential greater than the suction pressure fluctuation to assure oil flow from the oil reservoir through the oil level control to the compressor crankcase.

Sporlan offers OCVs with a 5, 10, 20 and 30 psi fixed differential setting. However, Sporlan recommends the use of an OCV-20 or OCV-30 on all field built up applications.

OIL LEVEL CONTROLS

The purpose of the Sporlan Oil Level Control is to regulate the flow of oil to the compressor crankcase to maintain a minimum oil level as specified by the compressor manufacturer for any given application. The Oil Level Control is adjustable between 1/2 sightglass and 1/4 sightglass at any pressure differential between 5 and 90 psid. As the level of oil is lowered in the compressor crankcase by being pumped out, the float of the Oil Level Control is lowered and opens a needle valve allowing oil to flow from the oil reservoir to the compressor crankcase.

OL-60FH

UL Recognized under SA5460-SFJQ2/SFJQ8 with a Maximum Rated Pressure (MRP) of 650 psi (45 bar).

OIL LEVEL CONTROLS – SELECTION AND SPECIFICATIONS

| York | GC, GS, JS | 3 Bolt, 1-7/8" B.C. (47.6 mm B.C.) | AOL-R-1 | Use seal provided | Use sightglass from compressor |

NOTE: Shipping weight is 4 lbs. (1.8 Kg) for oil level controls and 1 lb. (0.45 Kg) for adaptors.

① Some compressor models have a smaller diameter port than the arm diameter of the oil level control. This situation can mislead the control in the amount of oil that is actually in the compressor. It is advisable the selection and adjustment of the control be reviewed in this situation.

OIL LEVEL CONTROL SYSTEM

CO₂

OF SERIES OIL FILTERS

DESIGN BENEFITS

- Virtually eliminates the need for oil changes due to suspended particulate in circulation
- Unsurpassed filtering efficiency
99% removal of 3 micron sized particles
98% removal of 2 micron sized particles
- Element utilizes a pleated design for maximum surface area
- Unsurpassed filtration capacities
- High flow capacities with low pressure drop
- Filter element utilizes an O-ring seal
- Inert microglass filter material ensures lubricant compatibility
- Dimensions allow for easy replacement of current filter
- UL Listed under SA1756-SMGT/SMGT7 for the USA and Canada with a Maximum Rated Pressure (MRP) of 650 psi (45 bar)

c  US
LISTED

The Sporlan Catch-All or SF-283-F Suction Filter has been used for many years as an oil filter in refrigeration rack systems with mineral or alkylbenzene oil.

With the use of the new polyolester (POE) oils, system chemistry changed. Unlike mineral and alkylbenzene oils, POE oil has solvent-like tendencies. POE oil has the ability to suspend and recirculate small, solid contaminants left from system installation or retrofit. Analysis of POE oil samples taken from actual systems have shown the oil to suspend and recirculate a high concentration of 2-20 micron sized particles, with the largest percentage between 2-10 microns. Although some particles are smaller than bearing tolerances, studies have shown bearing life can still be affected. Bearing wear depends upon the size, hardness, and concentration of particles in circulation. To effectively remove these small particles, Sporlan developed a new type of oil filter.

The OF Series Oil Filters are designed to be 99% efficient in removing 3 micron sized particles and yet have sufficient flow capacity at a low pressure drop. The unsurpassed filtration ability of the oil filters will assure clean POE, mineral or alkylbenzene oil is returned to the compressors. Clean oil ensures proper operation of the oil level control and minimizes compressor wear. The Sporlan OF Series Oil Filters were designed to virtually eliminate the need for oil changes resulting from suspended solid contaminants in circulation.

SPECIFICATIONS

| UNIT | DESCRIPTION | CONNECTIONS | FILTERING AREA Square Inches (Square cm) | OVERALL LENGTH Inches (mm) | SHELL DIAMETER Inches (mm) | UL RATED WORKING PRESSURE psi (bar) |
|-----------|--------------------------------|----------------|--|-------------------------------|-------------------------------|--|

OFFER OF SALE

The items described in this document and other documents and descriptions provided by Parker Hannifin Corporation, its subsidiaries and its authorized distributors ("Seller") are hereby offered for sale at prices to be established by Seller. This offer and its acceptance by any customer ("Buyer") shall be governed by all of the following Terms and Conditions. Buyer's order for any item described in its document, when communicated to Seller verbally, or in writing, shall constitute acceptance of this offer. All goods, services or work described will be referred to as "Products".

1. Terms and Conditions. Seller's willingness to offer Products, or accept an order for Products, to or from Buyer is subject to these Terms and Conditions or any newer version of the terms and conditions found on-line at www.parker.com/saleterms/. Seller objects to any contrary or additional terms or conditions of Buyer's order or any other document issued by Buyer.

2. Price Adjustments; Payments. Prices stated on Seller's quote or other documentation offered by Seller are valid for 30 days, and do not include any sales, use, or other taxes unless specifically stated. Unless otherwise specified by Seller, all prices are F.C.A. Seller's facility (INCOTERMS 2010). Payment is subject to credit approval and is due 30 days from the date of invoice or such other term as required by Seller's Credit Department, after which Buyer shall pay interest on any unpaid invoices at the rate of 1.5% per month or the maximum allowable rate under applicable law.

3. Delivery Dates; Title and Risk; Shipment. All delivery dates are approximate and Seller shall not be responsible for any damages resulting from any delay. Regardless of the manner of shipment, title to any products and risk of loss or damage shall pass to Buyer upon placement of the products with the shipment carrier at Seller's facility. Unless otherwise stated, Seller may exercise its judgment in choosing the carrier and means of delivery. No deferral of shipment at Buyers' request beyond the respective dates indicated will be made except on terms that will indemnify, defend and hold Seller harmless against all loss and additional expense. Buyer shall be responsible for any additional shipping charges incurred by Seller due to Buyer's acts or omissions.

4. Warranty. Seller warrants that the Products sold hereunder shall be free from defects in material or workmanship for a period of twelve months from the date of delivery to Buyer or 2,000 hours of normal use, whichever occurs first. The prices charged for Seller's products are based upon the exclusive limited warranty stated above, and upon the following disclaimer: **DISCLAIMER OF WARRANTY: THIS WARRANTY COMPRISES THE SOLE AND ENTIRE WARRANTY PERTAINING TO PRODUCTS PROVIDED HEREUNDER. SELLER DISCLAIMS ALL OTHER WARRANTIES, EXPRESS AND IMPLIED, INCLUDING DESIGN, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.**

5. Claims; Commencement of Actions. Buyer shall promptly inspect all Products upon delivery. No claims for shortages will be allowed unless reported to the Seller within 10 days of delivery. No other claims against Seller will be allowed unless asserted in writing within 30 days after delivery. Buyer shall notify Seller of any alleged breach of warranty within 30 days after the date the defect is or should have been discovered by Buyer. Any action based upon breach of this agreement or upon any other claim arising out of this sale (other than an action by Seller for an amount due on any invoice) must be commenced within 12 months from the date of the breach without regard to the date breach is discovered.

6. LIMITATION OF LIABILITY. UPON NOTIFICATION, SELLER WILL, AT ITS OPTION, REPAIR OR REPLACE A DEFECTIVE PRODUCT, OR REFUND THE PURCHASE PRICE. IN NO EVENT SHALL SELLER BE LIABLE TO BUYER FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF, OR AS THE RESULT OF, THE SALE, DELIVERY, NON-DELIVERY, SERVICING, USE OR LOSS OF USE OF THE PRODUCTS OR ANY PART THEREOF, OR FOR ANY CHARGES OR EXPENSES OF ANY NATURE INCURRED WITHOUT SELLER'S WRITTEN CONSENT, EVEN IF SELLER HAS BEEN NEGLIGENT, WHETHER IN CONTRACT, TORT OR OTHER LEGAL THEORY. IN NO EVENT SHALL SELLER'S LIABILITY UNDER ANY CLAIM MADE BY BUYER EXCEED THE PURCHASE PRICE OF THE PRODUCTS.

7. User Responsibility. The user, through its own analysis and testing, is solely responsible for making the final selection of the system and Product and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects

of the application and follow applicable industry standards and Product information. If Seller provides Product or system options, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the Products or systems.

8. Loss to Buyer's Property. Any designs, tools, patterns, materials, drawings, confidential information or equipment furnished by Buyer or any other items which become Buyer's property, will be considered obsolete and may be destroyed by Seller after two consecutive years have elapsed without Buyer ordering the items manufactured using such property. Seller shall not be responsible for any loss or damage to such property while it is in Seller's possession or control.

9. Special Tooling. A tooling charge may be imposed for any special tooling, including without limitation, dies, fixtures, molds and patterns, acquired to manufacture Products. Such special tooling shall be and remain Seller's property notwithstanding payment of any charges by Buyer. In no event will Buyer acquire any interest in apparatus belonging to Seller which is utilized in the manufacture of the Products, even if such apparatus has been specially converted or adapted for such manufacture and notwithstanding any charges paid by Buyer. Unless otherwise agreed, Seller shall have the right to alter, discard or otherwise dispose of any special tooling or other property in its sole discretion at any time.

10. Buyer's Obligation; Rights of Seller. To secure payment of all sums due or otherwise, Seller shall retain a security interest in the goods delivered and this agreement shall be deemed a Security Agreement under the Uniform Commercial Code. Buyer authorizes Seller as its attorney to execute and file on Buyer's behalf all documents Seller deems necessary to perfect its security interest.

11. Improper use and Indemnity. Buyer shall indemnify, defend, and hold Seller harmless from any claim, liability, damages, lawsuits, and costs (including attorney fees), whether for personal injury, property damage, patent, trademark or copyright infringement or any other claim, brought by or incurred by Buyer, Buyer's employees, or any other person, arising out of: (a) improper selection, improper application or other misuse of Products purchased by Buyer from Seller; (b) any act or omission, negligent or otherwise, of Buyer; (c) Seller's use of patterns, plans, drawings, or specifications furnished by Buyer to manufacture Product; or (d) Buyer's failure to comply with these terms and conditions. Seller shall not indemnify Buyer under any circumstance except as otherwise provided.

12. Cancellations and Changes. Orders shall not be subject to cancellation or change by Buyer for any reason, except with Seller's written consent and upon terms that will indemnify, defend and hold Seller harmless against all direct, incidental and consequential loss or damage. Seller may change product features, specifications, designs and availability with notice to Buyer.

13. Limitation on Assignment. Buyer may not assign its rights or obligations under this agreement without the prior written consent of Seller.

14. Force Majeure. Seller does not assume the risk and shall not be liable for delay or failure to perform any of Seller's obligations by reason of circumstances beyond the reasonable control of Seller (hereinafter "Events of Force Majeure"). Events of Force Majeure shall include without limitation: accidents, strikes or labor disputes, acts of any government or government agency, acts of nature, delays or failures in delivery from carriers or suppliers, shortages of materials, or any other cause beyond Seller's reasonable control.

15. Waiver and Severability. Failure to enforce any provision of this agreement will not waive that provision nor will any such failure prejudice Seller's right to enforce that provision in the future. Invalidation of any provision of this agreement by legislation or other rule of law shall not invalidate any other provision herein. The remaining provisions of this agreement will remain in full force and effect.

16. Termination. Seller may terminate this agreement for any reason and at any time by giving Buyer thirty

(30) days written notice of termination. Seller may immediately terminate this agreement, in writing, if Buyer: (a) commits a breach of any provision of this agreement (b) appointments a trustee, receiver or custodian for all or any part of Buyer's property (c) files a petition for relief in bankruptcy on its own behalf, or by a third party (d) makes an assignment for the benefit of creditors, or (e) dissolves or liquidates all or a majority of its assets.

17. Governing Law. This agreement and the sale and delivery of all Products hereunder shall be deemed to have taken place in and shall be governed and construed in accordance with the laws of the State of Ohio, as applicable to contracts executed and wholly performed therein and without regard to conflicts of laws principles. Buyer irrevocably agrees and consents to the exclusive jurisdiction and venue of the courts of Cuyahoga County, Ohio with respect to any dispute, controversy or claim arising out of or relating to this agreement.

18. Indemnity for Infringement of Intellectual Property Rights. Seller shall have no liability for infringement of any patents, trademarks, copyrights, trade dress, trade secrets or similar rights except as provided in this Section. Seller will defend and indemnify Buyer against allegations of infringement of U.S. patents, U.S. trademarks, copyrights, trade dress and trade secrets ("Intellectual Property Rights"). Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on an allegation that a Product sold pursuant to this Agreement infringes the Intellectual Property Rights of a third party. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of such allegations of infringement, and Seller having sole control over the defense of any allegations or actions including all negotiations for settlement or compromise. If a Product is subject to a claim that it infringes the Intellectual Property Rights of a third party, Seller may, at its sole expense and option, procure for Buyer the right to continue using the Product, replace or modify the Product so as to make it noninfringing, or offer to accept return of the Product and return the purchase price less a reasonable allowance for depreciation. Notwithstanding the foregoing, Seller shall have no liability for claims of infringement based on information provided by Buyer, or directed to Products delivered hereunder for which the designs are specified in whole or part by Buyer, or infringements resulting from the modification, combination or use in a system of any Product sold hereunder. The foregoing provisions of this Section shall constitute Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for infringement of Intellectual Property Rights.

19. Entire Agreement. This agreement contains the entire agreement between the Buyer and Seller and constitutes the final, complete and exclusive expression of the terms of sale. All prior or contemporaneous written or oral agreements or negotiations with respect to the subject matter are herein merged.

20. Compliance with Law, U. K. Bribery Act and U.S. Foreign Corrupt Practices Act. Buyer agrees to comply with all applicable laws and regulations, including both those of the United Kingdom and the United States of America, and of the country or countries of the Territory in which Buyer may operate, including without limitation the U. K. Bribery Act, the U.S. Foreign Corrupt Practices Act ("FCPA") and the U.S. Anti-Kickback Act (the "Anti-Kickback Act"), and agrees to indemnify and hold harmless Seller from the consequences of any violation of such provisions by Buyer, its employees or agents. Buyer acknowledges that they are familiar with the provisions of the U. K. Bribery Act, the FCPA and the Anti-Kickback Act, and certifies that Buyer will adhere to the requirements thereof. In particular, Buyer represents and agrees that Buyer shall not make any payment or give anything of value, directly or indirectly to any governmental official, any foreign political party or official thereof, any candidate for foreign political office, or any commercial entity or person, for the purpose of influencing such person to purchase products or otherwise benefit the business of Seller.
